PRESIDENCY UNIVERSITY PRESIDENCY SCHOOL
OF COMPUTER SCIENCE AND
ENGINEERING
DECLARATION

We are the students of final year B.Tech in COMPUTER ENGINEERING (ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING,) at Presidency University, Bengaluru, Y. Shanmukha Arya Sree (20221COM0064), S. Abhinay (20221COM0010), Pathan Mohammad Khan (20221COM0047), hereby declare that the project work titled "AI Based Internship Recommendation Engine for PM Internship Scheme" has been independently carried out by me and submitted in partial fulfillment for the award of the degree of B.Tech in COMPUTER ENGINEERING (AI & ML) during the academic year of 2025- 2026. Further, the matter embodied in the project has not been submitted previously by anybody for the award of any Degree or Diploma to any other institution.

Y. SHNMUKHA ARYA SREE
S. ABHINAY
PATHAN MOHAMMAD KHAN

ACKNOWLEDGEMENTS

For completing this internship work, I have received the support and the guidance from many people whom I would like to mention with deep sense of gratitude and indebtedness. I extend my gratitude to our beloved **Chancellor, Pro-Vice Chancellor, and Registrar** for their support and encouragement in completion of the internship.

We would like to sincerely thank our internal guide **Dr. Mohamed Shakir**, Presidency School of Computer Science and Engineering, Presidency University, for his moral support, motivation, timely guidance and encouragement provided to me during the period of project work.

We are also thankful to **Dr. Gopal Krishna Shyam, Professor, Head of the Department, Presidency School of Computer Science and Engineering** Presidency University, for his mentorship and encouragement.

We express our cordial thanks to **Dr. Duraipandian N, Dean PSCS & PSIS, Dr. Shakkeera L**, Associate Dean, Presidency School of Computer Science and Engineering and the Management of Presidency University for providing the required facilities and intellectually stimulating environment that aided in the completion of my internship work.

We are grateful to **Ms. Sumita Guddin**, Program Project Coordinator, Presidency School of Computer Science and Engineering, for facilitating problem statements, coordinating reviews, monitoring progress, and providing valuable support and guidance.

We are also grateful to Teaching and Non-Teaching staff of Presidency School of Computer Science and Engineering and also staff from other departments who have extended their valuable help and cooperation.

Y. Shanmukha Arya Sree

S. Abhinay

Pathan Mohammad Khan

ABSTRACT

In the modern digital era, internships have become a critical component of a student's academic and professional journey, providing practical exposure, industry experience, and skill development. However, a significant challenge faced by students is the difficulty in identifying relevant internship opportunities that align with their skills, qualifications, and career aspirations. Traditional job portals and internship platforms often provide generic listings without personalization, leading to inefficient searches and missed opportunities.

To address these challenges, the project titled **“Pradhan Mitra – AI Powered Internship Recommendation System”** proposes an intelligent and user-centric solution that leverages artificial intelligence and modern web technologies. The system is designed to analyze user profiles, including academic details, technical skills, interests, and eligibility criteria, to generate personalized internship recommendations. By integrating an AI-based recommendation engine, the platform enhances decision-making by matching users with suitable opportunities more accurately than traditional systems.

The system consists of multiple functional modules, including user authentication, eligibility verification, skill analysis, resume building, and internship matching. One of the key features of the system is the inclusion of an ATS (Applicant Tracking System) optimized resume builder, which assists users in creating professional and structured resumes that improve their chances of selection during the recruitment process. The system is developed using modern technologies such as React, TypeScript, Tailwind CSS, and efficient state management techniques, ensuring a responsive, scalable, and user-friendly interface.

The implementation of the Pradhan Mitra system demonstrates significant improvements in simplifying the internship search process and enhancing user experience. The AI-driven recommendations reduce the time required to find suitable opportunities and increase the relevance of results.

In conclusion, this project presents an effective and scalable solution to the challenges of internship discovery by integrating artificial intelligence with intuitive design. The system has strong potential for future enhancements, such as real-time data integration, advanced machine learning models, and collaboration with official government databases, making it a valuable tool for students and policymakers alike.
